

## **Microbot Medical's LIBERTY® Robotic System Surpasses 100th Catheterization**

May 3, 2023

**95% success rate of reaching pre-determined vascular target with no intraoperative complications presented during pre-clinical studies**

HINGHAM, Mass., May 03, 2023 (GLOBE NEWSWIRE) -- Microbot Medical Inc. (Nasdaq: MBOT), the developer of the LIBERTY Robotic system, the first fully disposable robotic system, announced the system has surpassed its 100<sup>th</sup> catheterization during multiple pre-clinical studies, with a 95% success rate of reaching pre-determined vascular targets, such as distal branches of hepatic, gastric, splenic, mesenteric, renal, hypogastric arteries. Moreover, all of the procedures were completed without notable signs of intraoperative injury. The LIBERTY Robotic System performed safely, consistently and reliably, regardless of the operator.

Preponderance of data being generated from pre-clinical studies and feedback generates increased physician interest as the company advances towards commercialization objectives.

"The results of over 100 catheterizations represent an incredible accomplishment and further strengthen the LIBERTY Robotic System's previous collected data," commented Harel Gadot, Chairman, CEO and President. "The multiple studies have allowed us to demonstrate the system's consistent performance and safety profile, reaching the pre-determined vascular target. We believe that the data and feedback we have amassed and will continue to collect during additional studies scheduled in the U.S., will facilitate and support our regulatory pathway with the US Food and Drug Administration (FDA), including our plan to submit Investigational Device Exemption (IDE) in the coming months."

The LIBERTY Robotic System aims to improve the way surgical robotics are being used in endovascular procedures today, by eliminating the need for large, cumbersome, and expensive capital equipment, while reducing radiation exposure and physician strain. The Company believes the LIBERTY Robotic System's remote operation has the potential to be the first system to democratize endovascular interventional procedures.

### **About Microbot Medical**

Microbot Medical Inc. (NASDAQ: MBOT) is a pre-clinical medical device company that specializes in transformational micro-robotic technologies, focused primarily on both natural and artificial lumens within the human body. Microbot's current proprietary technological platforms provide the foundation for the development of a Multi Generation Pipeline Portfolio (MGPP).

Microbot Medical was founded in 2010 by Harel Gadot, Prof. Moshe Shoham, and Yossi Bornstein with the goals of improving clinical outcomes for patients and increasing accessibility through the use of micro-robotic technologies. Further information about Microbot Medical is available at <http://www.microbotmedical.com/>.
