

Microbot Medical Inc. Expands Global IP Portfolio as Patent in India Covering the Company's TipCAT™ Technology Platform is Issued

September 15, 2017

HINGHAM, Mass., Sept. 15, 2017 (GLOBE NEWSWIRE) -- Microbot Medical Inc. (Nasdaq:MBOT), a medical device company specializing in the design and development of transformational micro-robotic medical technologies, today announced that Intellectual Property India granted patent No. 286765, covering the Company's TipCAT™ technology platform.

"We continue to strengthen and expand our IP portfolio," commented Harel Gadot, Chief Executive Officer, President, and Chairman. "As a pioneer in micro-robotic surgery, this will allow us to add value to our assets as it is expected to enhance our ability to access global markets and create additional competitive advantages and barriers to entry. India is a large and emerging market and we believe having a strong IP presence in this market further builds shareholder value. In addition to India, the TipCAT™ technology platform patent has already been granted in the largest markets such as the U.S., China, Europe and several other markets, which we believe continues to show the strength of our IP assets. With this specific IP, our objective is to leverage the TipCAT platform to develop multiple products that address serious unmet needs in multiple medical applications."

Globally, the Company now has 23 patents which are already issued and an additional 13 patent applications pending worldwide. The Company's patents cover its ViRob™ and TipCAT™ technology platforms

About Microbot Medical, Inc.

Microbot, which was founded in 2010 and commenced operations in 2011, became a NASDAQ listed company on November 28, 2016. The Company specializes in transformational micro-robotic medical technologies leveraging the natural and artificial lumens within the human body. Microbot's current platforms, ViRob™ and TipCAT™, are comprised of two highly advanced micro-robotic technologies, from which the Company is currently developing its first two product candidates: the Self Cleaning Shunt, or SCS™, for the treatment of hydrocephalus and Normal Pressure Hydrocephalus, or NPH; and a self-propelling, semi-disposable endoscope that is being developed initially for use in colonoscopy procedures. Further information about Microbot Medical is available at <http://www.microbotmedical.com>.

The ViRob™ technology is a revolutionary autonomous crawling micro-robot which can be controlled remotely or within the body. Its miniature dimensions allow it to navigate and crawl in different spaces within the human body, including blood vessels, the digestive tract and the respiratory system. Its unique structure gives it the ability to move in tight spaces and curved passages as well as the ability to remain within the human body for prolonged time. To learn more about ViRob™ please visit <http://www.microbotmedical.com/technology/virob/>.

TipCAT™ is a transformational self-propelled, flexible, and semi-disposable endoscope providing see & treat capabilities within tubular lumens in the human body such as the colon, blood vessels, and the urinary tract. Its locomotion mechanism is perfectly suitable to navigate and crawl through natural & artificial tubular lumens, applying the minimal necessary pressure to achieve the adequate friction required for gentle, fast, and safe advancement within the human body. To learn more about TipCAT™ visit <http://www.microbotmedical.com/technology/tipcat/>.
