

Microbot Medical Closes Acquisition of Novel Technology from CardioSert Ltd.

May 25, 2018

HINGHAM, Mass., May 25, 2018 (GLOBE NEWSWIRE) -- Microbot Medical Inc. (NASDAQ CM:MBOT), a medical device company specializing in the design and development of transformational micro-robotic medical technologies, today announced the closing of the previously-announced acquisition of a novel patent-protected technology from CardioSert Ltd. Following the closing, the Company owns CardioSert's innovative technology, including R&D information, technical know-how and intellectual property.

"The completion of this exciting and value-added acquisition, combined with our existing capabilities, global IP and recent pre-clinical results is expected to allow us to deliver highly differentiated robotic products to address some of today's most unmet medical needs," commented Harel Gadot, Chief Executive Officer, President and Chairman. "Our product development team has already completed the process of evaluating the CardioSert technology, and while leveraging our new and enhanced R&D facilities in Israel, we expect to move forward with new applications in the coming few months, continue focusing on our SCS device and building a multi-generation product pipeline."

As previously disclosed, the acquisition of the assets and know-how was in exchange for 100,000 restricted shares of Microbot's common stock and a cash payment at closing of \$250,000, plus potential additional milestone payments and earn-outs. The CardioSert technology was originally developed to support interventional cardiologists in crossing the most complex lesions called chronic total occlusion (CTO) during percutaneous coronary intervention (PCI) procedures, but Microbot believes the technology has the potential to be used in other spaces and applications, such as peripheral intervention, neurosurgery and urology. CardioSert was part of a technological incubator supported by the Israel Innovation Authorities (formerly known as the Office of the Chief Scientist, or OCS), and its device has successfully completed pre-clinical testing.

About Microbot Medical, Inc.

Microbot was founded in 2010, which commenced operations in 2011, and became a NASDAQ listed company on November 28, 2016. The Company specializes in transformational micro-robotic medical technologies leveraging the natural and artificial lumens within the human body. Microbot's current platforms, ViRob and TipCAT, are comprised of two highly advanced micro-robotic technologies, from which the Company is currently developing its first two product candidates: the Self Cleaning Shunt, or SCS, for the treatment of hydrocephalus and Normal Pressure Hydrocephalus, or NPH; and a self-propelling, semi-disposable endoscope that is being developed initially for use in colonoscopy procedures. Further information about Microbot Medical is available at <http://www.microbotmedical.com>.

The ViRob technology is a revolutionary autonomous crawling micro-robot which can be controlled remotely or within the body. Its miniature dimensions allow it to navigate and crawl in different spaces within the human body, including blood vessels, the digestive tract and the respiratory system. Its unique structure gives it the ability to move in tight spaces and curved passages as well as the ability to remain within the human body for prolonged time. To learn more about ViRob please visit <http://www.microbotmedical.com/technology/virob/>.

TipCAT is a transformational self-propelled, flexible, and semi-disposable endoscope providing see & treat capabilities within tubular lumens in the human body such as the colon, blood vessels, and the urinary tract. Its locomotion mechanism is perfectly suitable to navigate and crawl through natural & artificial tubular lumens, applying the minimal necessary pressure to achieve the adequate friction required for gentle, fast, and safe advancement within the human body. To learn more about TipCAT visit <http://www.microbotmedical.com/technology/tipcat/>.
